

TalentLens AI — Implementation Guide

Hand this file to Copilot at the start of each session. Say: "**implement spec XX**" and Copilot will read the relevant spec file and implement that feature only, then stop for review.

How to use this

1. Open VS Code in this workspace.
2. Open Copilot Chat in **Agent mode**.
3. Say: **implement spec 01** (or whichever number you're on).
4. Copilot reads the spec, implements the feature, stops.
5. Review the output, fix any issues, then move to the next spec.

Never skip a step — each spec depends on the previous one being in place.

Backend specs (implement in order)

#	Spec file	What gets built	Status
01	specs/01-scaffold.md	NestJS project init, root package.json , .env.example , nest-cli.json , tsconfig.json	☐
02	specs/02-database.md	Prisma schema (all models) + seed.ts (~65 employees, 4 projects, 5 IRCs, pipeline entries)	☐
03	specs/03-auth.md	Auth module: signup, login, demo-login, JWT strategy, guards	☐
04	specs/04-projects-ircs.md	Projects + IRCs modules (read-only reference data, role-scoped)	☐
05	specs/05-pool.md	Resource pool endpoint (paginated, filterable, sortable) + Employee profile	☐
06	specs/06-pipeline.md	Pipeline module (stage moves, shortlist, not-fit, feedback rounds)	☐
07	specs/07-ai-search.md	Search module: LlamaService (LLM-based) + HeuristicService + SearchService + JD upload	☐
08	specs/08-candidate.md	Candidate-side endpoints (open IRCs, apply, my-pipeline, feedback, upcoming)	☐
09	specs/09-notifications.md	Notifications module	☐

Frontend specs (implement after all backend specs are done)

#	Spec file	What gets built	Status
10	specs/10-frontend-scaffold.md	Vite + TS setup, <code>tokens.css</code> , Tailwind config, <code>cn()</code> , <code>ApiClient</code> , <code>AuthContext</code> , <code>Shell</code> layout	
11	specs/11-login-page.md	Login/Signup page with demo-login buttons	
12	specs/12-dashboards.md	Manager dashboard + HR dashboard (KPIs, funnel chart, projects list)	
13	specs/13-ai-search-page.md	AI Search page — core feature (composer, staged loading, result cards, feedback chips)	
14	specs/14-pipeline-page.md	Pipeline Kanban board (stage columns, advance/revert, not-fit dialog)	
15	specs/15-pool-pages.md	Resource Pool table + IRC Applied table	
16	specs/16-candidate-pages.md	Open IRCs, My Pipeline stepper, My Feedback, Upcoming, Candidate Profile	

Demo acceptance test (spec is done when this passes)

1. Click "**Login as Manager (demo)**".
2. Go to **AI Search** → Payments Platform Phase 2 → IRC104521 → type *"Find engineers who've actually worked on similar payments integration projects"* → submit → get a real evidence-grounded AI-ranked list with why/why-not text.
3. Shortlist one candidate → appears in **Pipeline** → move them one stage forward.
4. Log out → "**Login as HR (demo)**" → see the same data org-wide.
5. Log out → "**Login as Candidate (demo)**" → see Satya Mishra's pipeline, feedback, upcoming interview.
